# Lab 2: Network Troubleshooting

NET311 - Computer Networks Management

Instructor: Dr. Mostafa Dahshan

# Objectives

- 1. Use protocol analyzers, such as Wireshark, to inspect the packet contents.
- 2. Use basic network troubleshooting tools, such as ping and traceroute utilities.

#### References

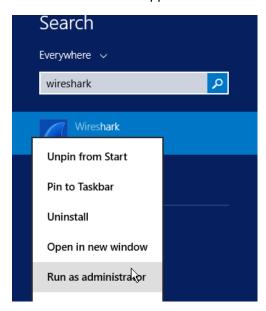

- 1. Computer Networks 5/E, Lab Exercise, Protocol Layers, David Wetherall.
- 2. Computer Networks 5/E, Lab Exercise, ICMP, David Wetherall.

#### Instructions

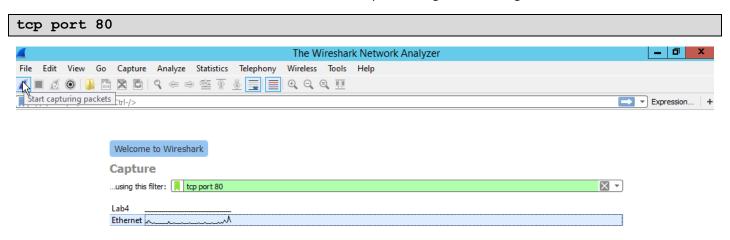

- 1. Read the lab instructions.
- 2. Provide question answers and screenshots in the supplied answer sheet.
- 3. After finishing the lab, upload your saved answer sheet to LMS.

# Part 1: Protocol Analyzers

1. Run the Wireshark application as an Administrator.

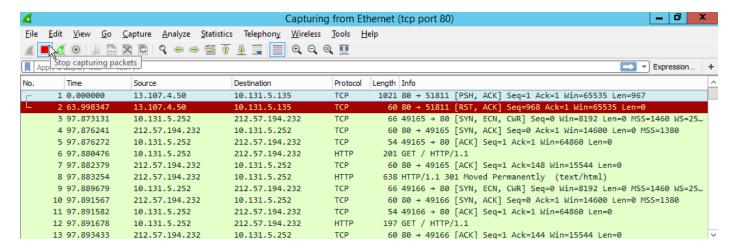

2. In Wireshark, select the Ethernet interface, and start a capture using the following filter:

3. Open Windows PowerShell and type the following command:

4. After the command is finished, return to Wireshark and **stop** the capture.

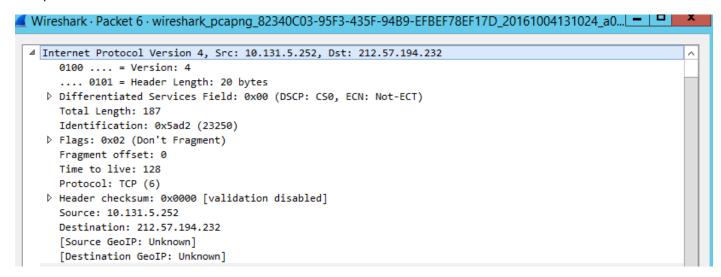

Lab sheet 1.1: provide a screenshot of Wireshark screen showing the captured packets.

5. Locate the packet HTTP GET packet and double click on it to inspect it.

		E 2 1		
6 97.880476	10.131.5.252	212.57.194.232	HTTP	201 GET / HTTP/1.1
7 97.882379	212.57.194.232	10.131.5.952	TCP	60 80 → 49165 [ACK] Sea=1 Ack=148 Win=15544 Len=0

6. Expand the details of Internet Protocol Version 4.

Lab sheet 1.2: Fill the following details of the Internet Protocol Version 4 protocol.

Total Length	Time to Live	Protocol	Source	Destination
TOTAL LENGTH	Tittle to Live	riotocoi	Jource	Destination

# 7. Expand the details of Hypertext Transfer Protocol.

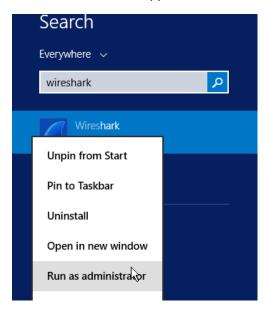

# Lab sheet 1.3: Fill the following details of the Hypertext Transfer Protocol.

Hint: You can use Control-C to copy from the Wireshark window.

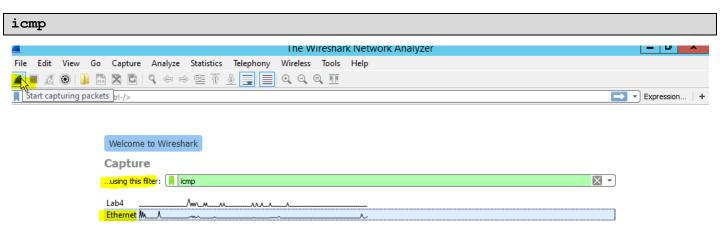

Request Method	Request URI	User-Agent	Host	
----------------	-------------	------------	------	--

# Part 2: Network Troubleshooting Tools

1. Run the Wireshark application as an Administrator.

2. In Wireshark, select the **Ethernet** interface, and start a capture using the following **filter**:

3. Open Windows PowerShell and type the following command:

```
Windows PowerShell

Windows PowerShell

PS C:\Users\Mostafa> ping www.google.com.sa

Pinging www.google.com.sa [216.58.208.195] with 32 bytes of data:

Reply from 216.58.208.195: bytes=32 time=88ms TIL=54

Reply from 216.58.208.195: bytes=32 time=86ms TIL=54

Reply from 216.58.208.195: bytes=32 time=87ms TIL=54

Reply from 216.58.208.195: bytes=32 time=85ms TIL=54

Ping statistics for 216.58.208.195:

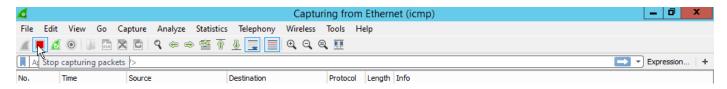

Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),

Approximate round trip times in milli-seconds:

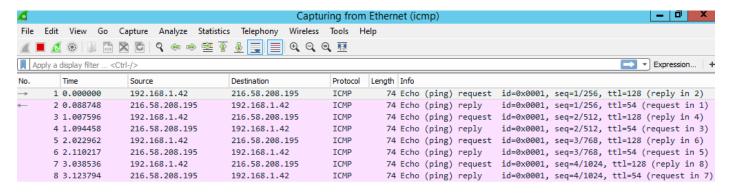

Minimum = 85ms, Maximum = 88ms, Average = 86ms

PS C:\Users\Mostafa>
```

4. After the command is finished, return to Wireshark and **stop** the capture.

5. Inspect the ICMP packets by expanding the **Internet Control Message Protocol** fields, then answer the following questions.

```
    Frame 1: 74 bytes on wire (592 bits), 74 bytes captured (592 bits) on interface 0

    Ethernet II, Src: CadmusCo_a5:44:42 (08:00:27:a5:44:42), Dst: Technico_6a:71:4c (58:98:35:6a:71:4c)

    Internet Protocol Version 4, Src: 192.168.1.42, Dst: 216.58.208.195

    Internet Control Message Protocol

    Type: 8 (Echo (ping) request)
    Code: 0
    Checksum: 0x4d5a [correct]
    Identifier (BE): 1 (0x0001)
    Identifier (LE): 256 (0x0100)
    Sequence number (BE): 1 (0x0001)
    Sequence number (LE): 256 (0x0100)
    [Response frame: 2]

    | Prame 1: 74 bytes on wire (592 bits), 74 bytes captured (592 bits) on interface 0

| Prame 1: 74 bytes on wire (592 bits), 74 bytes captured (592 bits) on interface 0
| Prame 1: 74 bytes on wire (592 bits), 74 bytes captured (592 bits) on interface 0
| Prame 1: 74 bytes on wire (59:98:35:6a:71:4c)
| Prame 1: 74 bytes on wire (58:98:35:6a:71:4c)
| Prame 1: 74 bytes on wire (58:98
```

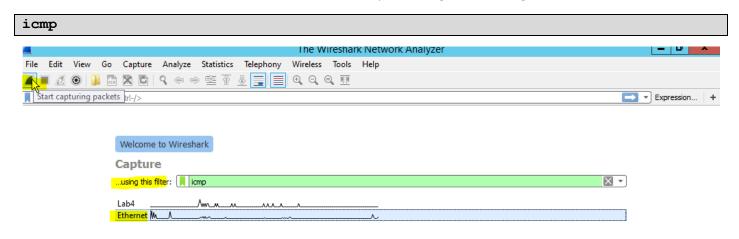

# Lab sheet 2.1: Answer the following questions.

What is the Type/Code value of the first ICMP request?	
What is Type/Code value of the first ICMP reply?	
What is Sequence number of the second ICMP request?	
What is Sequence number of the second ICMP reply?	
What is Data of the third ICMP request?	
What is Data of the third ICMP reply?	
What is Time of the fourth ICMP request?	
What is Time of the fourth ICMP reply?	

#### 6. Close the Wireshark capture.

7. In Wireshark, select the **Ethernet** interface, and start a capture using the following **filter**:

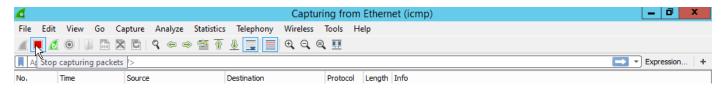

8. Open **Windows PowerShell** and type the following command:

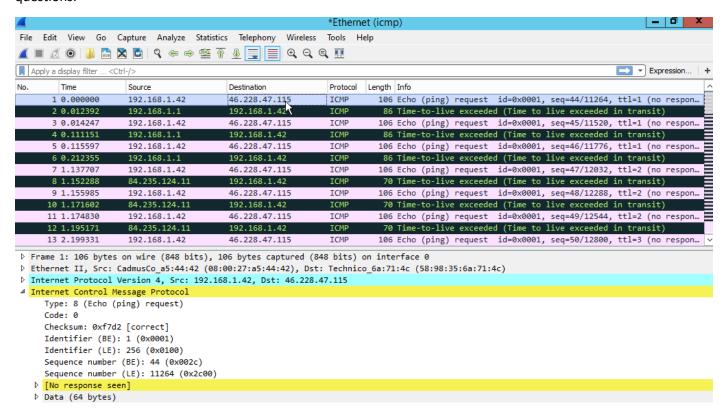

```
tracert -d www.yahoo.com
 \mathbf{Z}
                                                                                       Windows PowerShell
Windows PowerShell

```

#### Lab sheet 2.2: Provide a screenshot showing the output of the tracert command.

9. After the command is finished, return to Wireshark and **stop** the capture.

10. Inspect the ICMP packets by expanding the **Internet Control Message Protocol** fields, then answer the following questions.

### Lab sheet 2.3: Answer the following questions.

What is the TTL (Time to live) value in the first ICMP request?	
What is the Type/Code value of the first ICMP request?	
What is the Type/Code value of the first ICMP TTCL Exceeded response?	
How many ICMP packets with TTL = 1?	
What is the source IP address of the second ICMP TTL Exceeded response?	
What is the source IP address of the third ICMP TTL Exceeded response?	
What is the largest TTL value in ICMP requests after the last TTL Exceeded	
response?	

11. Expand the Internet Protocol Version 4 section of the first ICMP request.

Lab sheet 2.4: Provide a screenshot showing the details of the Internet Protocol Version 4 section of the first ICMP request.

```
